This is not a HTTP site. If you're looking for HTML information for the HTTP site, please

■ **Sender Policy Framework**

A *Forbes* Senior Editor, Jameson (@J4) discusses what can send mail in to itself. This is done by publishing an @ record containing a series of *forbes*. Each row consists of a quarter followed by a space and then of which domains it apply this qualifier to. For more information please see open.upto.org/2

[illegible] DMAHC

DMARC (Domain-based Message Authentication, Reporting and Conformance) is a mechanism for domain owners to indicate how mail purporting to originate from their domain should be authenticated. It builds on SPF and DKIM, providing a method to set policy and to give reporting of failures. For more information please see www.dmarc.org

Tag	Field	Value
project	Requester naming policy	Applicant's name for the DMARC mechanism shall should be identical. Random SHOULD occur during the DMTP transaction.
app-id	Domain key	12345 of messages from the Domain Owner's mail server should have DMARC tag=1
mail-receiver-addr@domain.com	Requesting office for aggregate view	test-foo@domain.com
mail-receiver-addr@domain.com	Requesting office for follow view	test-foo@domain.com
test	Requester's email address	test-foo@domain.com

Web Trackers

Web fragments are tri-agonally resource loaded into a webpage. Tri-agonal resources include social sharing widgets, javascript files, and images. These fragments can be used to monitor individual user behaviors across the web. Data derived from these resources are primarily used for advertising or analytics purposes.

2 known trackpot were identified.

TASK 4: Gather Information Using Deep & Dark Web

Difference Between Surface Web and Dark Web

Surface Web	Dark Web
It can be accessed using normal browsers like Chrome or Firefox.	It requires special browsers like Tor to access.
It includes public websites available to everyone.	It contains anonymous and hidden websites.
Content is generally legal and regulated.	Content may include hidden or illegal services.
It is indexed by search engines like Google and Bing.	It is not indexed by regular search engines.
Examples: News websites, blogs, social media.	Examples: .onion websites, hidden marketplaces.

TASK 5: Determine Target OS Through Passive Footprinting

The image shows a browser window with the Censys search interface. The browser's address bar displays 'search.censys.io'. The page features the Censys logo at the top center. Below the logo is a search bar with a dropdown menu set to 'Hosts'. The search input field contains 'www.eccouncil.org', and a blue 'Search' button is to its right. Below the search bar, statistics are shown: 'Services: 3.4B', 'IPv4 Hosts: 230.0M', and 'Virtual Hosts: 1.6B'. A navigation bar includes links for 'GETTING STARTED', 'API DOCUMENTATION', 'COMMUNITY', and 'TRY BETA FEATURES'. A 'Latest Update' section notes a '394 days ago' update for 'Enhanced non-standard port protocol detection'. The footer contains links for 'Resource Hub', 'Attack Surface Management', 'Government', and 'Research Access', along with a 'Need Help?' link and copyright information for 2026 Censys.
